# DENITSA DIMITROVA

software engineer

## WORK EXPERIENCE

### Prime Holding JSC

Software Engineer  
09.2020 - 03.2023

Intern  
02.2020 - 08.2020

### Projects:

#### Golnstore

**Term:** 15 months

**Team size:** 6 people

**Technology Stack:** Java, SonarCloud, Spring Boot, Spring Security, MySQL, Hibernate, Maven, H2 database (for tests), Redis, Redshift

**Responsibilities within the project:**

Development of REST API for an admin portal application of a retail online consulting system Golnstore. Integration of third party services for managing video streams and live chat. Live and period metrics for video engagement. Integrating the Golnstore portal as part of Emplifi admin portal and implementing custom authentication flow handling login from both an integrated Emplifi account and standalone Golnstore account.

**Business value:**

Multi-tenant portal to allow Golnstore's employees and clients to automate frequent manual flows: to set up and change customer details, to create reports and obtain statistics and metrics to gain insight, engage the customer and manage the accounts, to administer account details, store locations, and clerks - management and staff accounts, real-time view of work flow.

#### LiquidTools

**Term:** 12 months

**Team size:** 10 people

**Technology Stack:** Java, Spring Boot, Docker, MySQL, Redis, Microservices

**Responsibilities within the project:**

Split into microservices an already existing monolith application. Refactor modules of the application, unit test and fix bugs. Plan sprints with head of front-end development and design.

**Business value:**

Liquid Tools is an end-to-end employee engagement solution that helps companies identify engaged employees and align performance review scores with employee engagement sentiment. It consists of 5 modules: Meetings, Goals, Feedback, Technical Classification, Performance Review
